1. Europe's abrupt and widespread blackout is linked to renewables and net-zero emissions targets.
2. The UK government is funding solar geoengineering research projects to artificially cool the Earth.
3. European countries are raising taxes, leading to an exodus of high-net-worth individuals.
4. The next step in Europe's financial crisis is asset seizure, with the elimination of cash well underway.
5. Bitcoin's value lies in its ability to be self-custodied, making it immune to seizure.
6. Wall Street's focus on financial innovation over production has led to the decline of the US economy.
7. The US has been strip-mined in favor of globalization, with Trump attempting to reverse this.
8. Weaponizing the USD and global trade has backfired, leading to an explosion in cross-border trade sans the US system.
9. The US is sitting on mountains of IOUs with a bloated and out of date military, leading to a repricing of bonds and asset classes.
10. The current economic climate highlights the importance of holding hard assets.
